

**Future  
Security**

**FuSec**

# Structure

---

01

## Basics

What is the dashboard for?

02

## Calculation

How is the risk score calculated?

03

## Outlook

What are ideas for a potential future?

# Basics

**What does the dashboard display?**

---

# What does the dashboard display?

---

## Overall View

Shows the criticality of all systems connected to findings within the database

## CVE & Advanced Search

Allows to search your systems for explicit CVEs or software version combinations

## Mitigation

Finds a mitigation for a chosen CVE

# Calculation

# How is the risk score calculated?

## Overall View

Calculation per System

Rating	noKnownExploit	knownExploit
Low	1	8
Medium	2	16
High	4	32

$$\text{totalRiskScore} = \sum_{k=1}^n (\text{RatingApp}_k)$$

$$\text{RatingApp}_k = \sum_{k=1}^n (\text{Rating}_k * \text{knownExploit} * \text{isProd})$$

knownExploit  $\in \{1 \text{ (noKnown)}, 8 \text{ (known)}\}$

isProd  $\in \{1 \text{ (notProd)}, 2 \text{ (prod)}\}$

# Showcase

---

## Outlook

---

# Outlook

---

- scalability in Kubernetes
- improved mitigation recommendations by including more context about the organization
- expand the risk score by analyzing the network infrastructure
